

## Education

---

|                        |                                |                        |
|------------------------|--------------------------------|------------------------|
| <b>Burnaby, Canada</b> | <b>Simon Fraser University</b> | Sept. 2014 - Aug. 2022 |
|------------------------|--------------------------------|------------------------|

- Double Major - BSc. Software Systems (Computer Science); BSc. Interactive Arts and Technology (UI/UX)

## Work Experience

---

|                                 |                 |                     |
|---------------------------------|-----------------|---------------------|
| <b>Senior Software Engineer</b> | <b>Fortinet</b> | Oct. 2025 - Present |
|---------------------------------|-----------------|---------------------|

- Full-Stack + Backend | TypeScript/React/Python/C
- Designed and shipped databases for core modules such as CSP, integrating weekly builds into Fortinet's FortiWeb FortiGuard Distribution System (FDS).
- Delivered high-priority features in the Attack Signature full-stack application by building APIs for QA and Cloud teams and implementing workflow tooling for signature designers and reviewers.
- Built a custom CI/CD-integrated testing dashboard, dynamic email system, and front-end enhancements to streamline and accelerate attack signature workflows.
- Owned CI/CD pipelines and managed webserver infrastructure to reliably deploy and host internal applications and services.

---

|                               |                 |                        |
|-------------------------------|-----------------|------------------------|
| <b>Software Engineer I/II</b> | <b>Fortinet</b> | Oct. 2022 - Sept. 2025 |
|-------------------------------|-----------------|------------------------|

- Full-Stack + Backend | TypeScript/React/Python/C
- Designed and built a lightweight monitoring and telemetry system in FortiWeb to detect WAF bypasses across 80+ modules, improving visibility into security regressions and increasing customer confidence.
- Replaced a legacy inter-product API with a modern, secure service for IP ban list propagation between FortiWeb and FortiGate, reducing maintenance overhead and improving resilience.
- Built an internal full-stack Attack Signature platform using React, TypeScript, Django, and NGINX to manage large-scale attack signature databases, accelerating rule creation and improving traceability.
- Owned multiple WAF modules within FortiWeb, resolving critical bugs, coordinating with QA teams, and supporting customer escalations alongside support engineering teams.
- Optimized memory usage and concurrency handling in Global White List and other core modules, improving throughput and data parsing efficiency.

|                                 |                                |                        |
|---------------------------------|--------------------------------|------------------------|
| <b>Software Developer Co-op</b> | <b>Simon Fraser University</b> | Sept. 2020 - Dec. 2020 |
|---------------------------------|--------------------------------|------------------------|

- Full-Stack + Data Analyst | TypeScript/React/C + Pandas/D3.js/Python/Automation
- Transformed academic data into interactive visualizations highlighting SFU's research performance.
- Automated data processing via API integration, Python scripting, and scheduled tasks on VMs.
- Enhanced SFU's room booking system by developing React features that improved user experience.

## Technical Skills

- 
- Skills: Front-end; Back-end; Data Visualization; UI/UX Design; Software Testing
  - Languages: Python, JavaScript, TypeScript, C, SQL, HTML/CSS, Bash
  - Technologies: React.js, D3.js, SQLite, PostgreSQL, MySQL, Docker, Git, OCR, Pandas, Postman, Linux
